Sign in

Enter your user name and password. On a touch screen you can type the numbers on the number pad, or type on the keyboard as usual.

How to use it

1. Tap a box (user name or password) and type on the keyboard, or use the number pad below.
2. The "Number pad (touch)" button shows or hides it. On a touch screen it shows by itself, and the program remembers your choice on this device.
3. "Clear" empties the box, and the arrow deletes the last digit.
4. Press "Sign in".
5. The "Exit program" button at the top closes the program on this computer: it takes the backup if it's on, then stops the server and closes the window. It shows only on the program's computer (not on network devices).

Notes

- The first time the program runs it asks you to create the admin account (name, user name and password).
- After 5 wrong attempts the account is locked for 5 minutes.
- The buttons at the top: language, help, on-screen keyboard and background.
